Dear Hiring Manager,

Hello,

I am a Senior SQL Server Database Administrator with more than 10 years of database experience and strong specialization in SQL Server administration, performance tuning, and high availability architecture.

I have extensive hands-on experience with SQL Server 2012–2022, query optimization, execution plan analysis, indexing strategies, and disaster recovery implementation. In my previous roles, I successfully improved database performance by up to 40% and maintained 99.9% uptime for mission-critical systems.

I also have experience working with Azure hybrid environments and building database-driven applications using Oracle APEX.

I would be happy to help optimize your database infrastructure, improve system performance, and support production environments.

Portfolio:

Looking forward to discussing how I can contribute to your team.

Best regards
Amir Ahmed
